Full Environmental Assessment Form
Part 2 - Identification of Potential Project Impacts

Agency Use Only [If applicable]

Project :
 Date :

Part 2 is to be completed by the lead agency. Part 2 is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency's reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

If the lead agency is a state agency **and** the action is in any Coastal Area, complete the Coastal Assessment Form before proceeding with this assessment.

Tips for completing Part 2:

- Review all of the information provided in Part 1.
- Review any application, maps, supporting materials and the Full EAF Workbook.
- Answer each of the 18 questions in Part 2.
- If you answer “**Yes**” to a numbered question, please complete all the questions that follow in that section.
- If you answer “**No**” to a numbered question, move on to the next numbered question.
- Check appropriate column to indicate the anticipated size of the impact.
- Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box “Moderate to large impact may occur.”
- The reviewer is not expected to be an expert in environmental analysis.
- If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
- When answering a question consider all components of the proposed activity, that is, the “whole action”.
- Consider the possibility for long-term and cumulative impacts as well as direct impacts.
- Answer the question in a reasonable manner considering the scale and context of the project.

Part 3 - Evaluation of the Magnitude and Importance of Project Impacts
and
Determination of Significance

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

Reasons Supporting This Determination:

To complete this section:

- Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
- Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
- The assessment should take into consideration any design element or project changes.
- Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
- Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
- For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
- Attach additional sheets, as needed.

Refer to attached narrative.

and considering both the magnitude and importance of each identified potential impact, it is the conclusion of the
Town of Fayette Planning Board as lead agency that:

A. This project will result in no significant adverse impacts on the environment, and, therefore, an environmental impact statement need not be prepared. Accordingly, this negative declaration is issued.

B. Although this project could have a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

There will, therefore, be no significant adverse impacts from the project as conditioned, and, therefore, this conditioned negative declaration is issued. A conditioned negative declaration may be used only for UNLISTED actions (see 6 NYCRR 617.7(d)).

C. This Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impact(s) and possible mitigation and to explore alternatives to avoid or reduce those impacts. Accordingly, this positive declaration is issued.

FULL ENVIRONMENTAL ASSESSMENT FORM

PART III – EVALUATION OF THE SIGNIFICANCE OF IMPACTS

The Town of Fayette Planning Board has compared the impacts reasonably expected to result from the proposed Delaware River Solar (DRS) and its affiliate NY Fayette I, LLC, NY Fayette I Community Solar Farm Project as outlines herein, including:

- Considered the action as defined in subdivisions 617.2(b) and 617.3(g);
- Reviewed the FEAF, the criteria identified in 617.7(c)(1) and other supporting information to identify relevant areas of environmental concern;
- For the purpose of determining significant adverse impacts on the environment of those factors listed above, the long-term, short-term, direct, indirect and cumulative impacts, including simultaneous or subsequent actions, to the extent reasonable, as included in any long range plan for the action, any action that is a result of the reviewed action or is dependent on the action was reviewed 617.7(c)(2); and
- The significance of any likely consequences was assessed in connection with the setting of the action, the likelihood of occurrence, duration, irreversibility, geographic scope, magnitude and the number of people affected as a consequence of the action. 617.7(c)(3).

The following summarizes the review of the criteria provided in 617.7(c) as indicators of significant adverse impacts and how the project has been designed to avoid significant adverse environmental impacts:

Part II, Section 8. Impact on Agricultural Resources

As the Project is proposed to take place on agricultural land, the proposed action may sever, cross or otherwise limit access to agricultural land. The proposed project has been designed to allow the landowner to continue utilizing the remaining portions of the parcel as pastureland to the maximum extent practicable. The proposed project area will be seeded with native low growth ground cover. Because the project site is within an Agricultural District mapped by the New York State Department of Agriculture and Markets (NYSDAM), the project sponsor has been required to submit a Notice of Intent (NOI) to place a solar project within an agricultural district. As such, the project sponsor will be required to adhere to the agricultural monitoring and mitigation requirements spelled out in the NOI approval by NYSDAM. A Decommissioning Plan has been prepared by NY Fayette I, LLC to address the removal of the Project at the end of its useful life, after which the agricultural land will be restored to pre-construction condition. Thus, there is no significant impact anticipated for these criteria.

Part II, Section 15. Impact on Noise, Odor, and Light

Air quality, ground or surface water quality, traffic or noise levels, solid waste production, erosion potential, flooding, leaching, or drainage problems:

During construction, dust and exhaust from equipment may affect air quality. However, these impacts will be temporary and generally minor in nature. The solar panels will not affect air quality during operations. The solar panels are elevated off the ground on poles and will not create any new impervious surfaces that would exacerbate erosion or drainage problems. The proposed project will possess a Stormwater Pollution Prevention Plan and will be covered under the NYSDEC Stormwater General Permit, require

erosion and sediment control inspections during and immediately following construction. The concrete inverter pads will have a very small footprint, accounting for 0.02 acres of the 121.80-acre site, and any minor stormwater created by this pad will be retained on-site as detailed on the submitted site plans. The installation of the solar panels will not increase traffic after construction, as only 3-5 trips to the project site by the project sponsor per year are proposed. Any minor noise created by the project during operation conforms to Town of Fayette code and applicable state and federal regulations. Thus, there is no significant impact anticipated for these criteria.

The Planning Board of the Town of Fayette has reviewed the Full Environmental Assessment Form (FEAF) and the criteria contained in 6 NYCRR §617.7 and completed Parts II and III of the FEAF and has determined that the Fayette I Community Solar Farm Project will not have significant adverse impacts on the environment.

Upon review of the information recorded on this EAF, as noted, plus this additional support information
Refer to attached narrative document.
